Dermatology for Primary Care Providers

September 23, 2017
Warren Alpert Medical School of Brown University | Providence, RI

Program Description
Up to two thirds of patients with a primary skin complaint present to primary care providers. This one day course is designed to enhance primary care providers’ knowledge and comfort with dermatologic issues. Through case based discussions, we will focus on the approach to evaluating these patients, differentiating between the most common skin diagnoses, and choosing treatment options. We will cover skin signs of systemic disease, how to differentiate benign from malignant lesions, and discuss drug reactions and dermatologic emergencies.

Competencies Areas
**ABMS:** Patient Care & Procedural Skills | Medical Knowledge Practice-based Learning and Improvement | Interpersonal and Communication Skills | Systems-based Practice
**IOM:** Provide Patient-Centered Care | Work Within Interdisciplinary Teams | Employ Evidenced-Based Practice | Apply Quality Improvement

Learning Objectives
At the conclusion of this activity participants should be able to:
- Differentiate primary lesions and describe the approach to a patient with a rash, including creating appropriate differentials
- Describe appropriate counseling for prevention of skin cancer
- List the most common types of skin cancers, and describe the most common features to differentiate benign from malignant lesions
- Describe different treatment options for the most common skin disorders, and choose when each might be most appropriate to use depending on the type of presentation

Target Audience
Physicians, physician assistants, nurse practitioners, residents, and fellows specializing in primary care and pediatrics.
