Program Description
The Annual Dermatology-Rheumatology Update will provide participants with teaching points and pearls for the management of complex autoimmune diseases, which may exhibit both musculoskeletal and cutaneous manifestations. Complex dermatologic-rheumatologic conditions are often overlooked and poorly managed due to inaccurate diagnosis and subsequent mismanagement. Psoriasis, psoriatic arthritis, scleroderma, lupus, dermatomyositis, and biologic therapies will be discussed from a multi-disciplinary team with expertise on various cutaneous immunologic diseases. Through an interactive, case-based approach, participants will learn how to diagnose, manage, and treat complex dermatologic-rheumatologic conditions using cutting-edge therapeutics and current clinical guidelines.

Target Audience
Physicians, Physician Assistants, Nurse Practitioners, Residents, and Fellows specializing in the Primary Care Setting as well as Dermatology and Rheumatology specialists.

Learning Objectives:
At the conclusion of this activity participants should be able to:
• Diagnose complex dermatologic-rheumatologic conditions
• Integrate the use of targeted therapy and new biologics
• Monitor and provide prophylaxis for patients on biologic and immunosuppressant therapy
